

# Amicus AquaStore

## HEAT PUMP WATER HEATER

### KEY FEATURES

- 8kW output: The UK's largest heat pump water heater
- Plug & Play: Quick and easy to install with space saving design
- Touch screen display for custom settings and status reports
- Monoblock construction
- 65°C output in heat pump mode
- Up to 350 l/hr at a 50° temperature rise with immersion
- Built in redundancy – up to 12kW immersion available for backup

# Lochinvar Amicus AquaStore Heat Pump Water Heater

Amicus AquaStore is a packaged heat pump water heater designed to provide DHW only and can work at temperatures up to 65°C without immersion heater support. There are 3 models in the range all with an 8kW heat pump but with different sized immersion back-up available up to 12 kW. They can provide hot water recovery rates of 350 litres per hour based on a temperature rise of 50°C.

Suitable for a range of small to medium sized commercial applications they provide hot water with zero on site emissions: as such they are fully BREEAM compliant.

## ErP / EcoDesign certified product

The range has been tested and certified in accordance with the EcoDesign directive, providing peace of mind for specifiers, contractors and end users.

## Insulated and jacketed storage vessel

With a storage vessel construction from enamelled steel, Amicus AquaStore water heaters are capable of operating at working pressures of up to 8bar. An integral magnesium anode provides cathodic protection.

The storage vessel is insulated with 50mm polyurethane foam and encased in an enamelled grey jacket.

## Designed for ease of maintenance

Access to refrigeration lines and compressor is provided from the front of the Amicus AquaStore water heater.

## BREEAM and zero on-site emissions

BREEAM is the world's longest established method of assessing, rating, and certifying the sustainability of buildings. It aims to help construction professionals and building owners to manage and mitigate risk through demonstrating sustainability performance during planning, design, construction, operation, or refurbishment. It is also designed to help lower running costs, maximise returns through market value, attract, and retain tenants with desirable places to live and work.

Amicus AquaStore water heaters do not have any on-site carbon or NO<sub>x</sub> emissions making them particularly suitable for BREEAM projects.

**breeam**

## Water heater connections

Description	
1	T&P valve connection
2	Hot outlet
3	Drain
4	Cold inlet
5	Touch screen display
6	Electrical cable entry point

## Technical specifications

Model		LAAS 8-455-6	LAAS 8-455-9	LAAS 8-455-12

## Installation

The Amicus AquaStore should be sited in an area which:

- Can bear the weight of the unit
- Has enough space around the unit to allow maintenance, see clearances
- Does not present a noise nuisance to users of the building and neighbours
- Has enough ventilation
- Frost free
- Has an air humidity of max 93% RH at 25°C

## Dimensions

Description			LAAS 8-455-6	LAAS 8-455-9	LAAS 8-455-12
A	Device height	mm	1770		
D	Device width	mm	785		
E	Device depth	mm	995

B	Height hot water outlet connection	mm	1470		
R	Height drain valve connection	mm	165		
S	Height T&P-valve connection	mm	1470		
W	Height condensate drain connection	mm	15		
1	Cold water supply connection (female)	NPT	3/4"		
2	Hot water outlet connection (female)	NPT	3/4"		
4	Drain valve connection (female)	NPT	3/4"		
5	T&P-valve connection (female)	NPT	3/4"		

## Operational limits

Amicus AquaStore can provide domestic hot water at temperatures up to 65°C when in Hybrid mode and over 82°C when in power mode using the electrical elements only, for example for pasteurisation.

## Sizing

When sizing the AquaStore heat pump careful consideration needs to be taken of the hot water load and peak demand period. Lochinvar can help with sizing your project, contact your local area sales manager or email [info@lochinvar.ltd.uk](mailto:info@lochinvar.ltd.uk)

## Positioning on site

Amicus AquaStore must only be installed in a plantroom it is not suitable for external installation, the plantroom must be large enough to prevent the plantroom from cooling down too much whilst the unit is in operation. The size of the plantroom required will depend on the usage patterns of the heat pump, the larger the peak the larger the plantroom will need to be. The largest plantroom size required will be 90m<sup>3</sup>. If the plantroom size is too small ventilation louvres will need to be fitted to allow both air in and exhaust air out to avoid pressurising the plantroom. Ventilation should ideally be supplied via a heated space to prevent the plantroom from being overcooled risking frost damage to the AquaStore and general plant area.

## Clearances

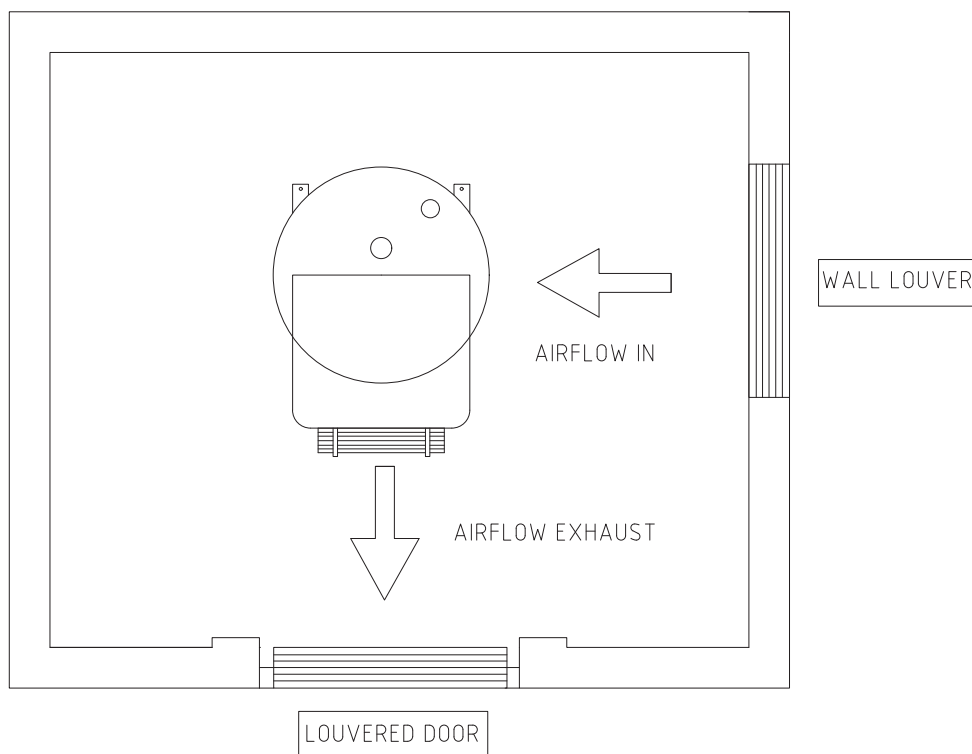

Amicus AquaStore require minimum clearances around them to enable maintenance of the unit

The front of the unit must maintain a clearance of at least 1000mm to ensure the exhaust fans are not restricted which will cause operational issues.

## Airflow

Amicus AquaStore require a constant air flow when in operation of 2275 m<sup>3</sup>/h across the evaporator, this will result in a gradual cooling of the plantroom air. The unit should not cool the room by more than 8°C, if it does this indicates that there is insufficient air within the plantroom. The amount of ventilation required will depend on the usage pattern of the water heater and can be calculated by Lochinvar Limited.

### Positioning multiple units

When positioning multiple units' minimum distances must be observed, airflow requirements will also be larger. please contact Lochinvar technical support for further help and guidance.

### Ancillary items available

#### WH9 Destratification pump

To improve stratification within the vessel it may be a site requirement to install a de-stratification pump, this is available from Lochinvar as an ancillary extra.

The WH9 de-stratification kit consists of:

- 1no LM900139A Bronze pump
- 2no 28mm gate valves
- 1no 28mm NRV

DRIVE

Current draw speed 1/2/3	A	0.16/0.2/0.23
Approvals		CE,WEEE,WRAS
DIMENSIONS		
Port to port length	mm	130

## Unvented Installation

When installing AquaStore on an unvented system a suitable kit of components is available from Lochinvar as an ancillary extra.

The WH15A-RF unvented kit includes all components required and includes:

- 22mm Monoblock incorporating a pressure reducing valve, non-return valve and 6 bar pressure relief valve
- $\frac{3}{4}$ " temperature and pressure relief valve
- 22mm tundish
- 25 litre flow through expansion vessel

Single AquaStore on an unvented system

Amicus AquaStore can be installed as a single unit or in multiples depending upon the load, if there is a larger peak load than the unit can supply and then a prolonged period with limited demand (such as a football training ground), AquaStore can be matched with a suitable sized buffer vessel. This will reduce capital cost whilst allowing an efficient method of producing hot water without using extra immersion heaters

## Electrical Connections

All models require a 3-phase supply with standard electrical requirements as per technical specifications.

Provision should be made for local isolation with a lockable isolator fitted on or very close to the heat pump.

A single 230v plug socket should also be fitted close to the unit to aid commissioning and future maintenance.

Energy label, product fiche and ErP data table are available at [www.lochinvar.ltd.uk](http://www.lochinvar.ltd.uk)

For further information on the Amicus AquaStore heat pump water heaters, including ICM & user instructions and our full warranty terms and conditions, please visit our website: [www.lochinvar.ltd.uk](http://www.lochinvar.ltd.uk)
